

Science Project Displays

This outlines the sections and information that needs to be on/with your display.

The main rule is that you should summarize the main parts of your project in an organized, clear way.

The easiest way might be for you to summarize each section on your report on the display.

Please don't just print your report and glue it to a board!!!

You should be sure to include, at **minimum**, the following information:

Title and Names

Abstract

Question

Hypothesis

Materials & Procedure

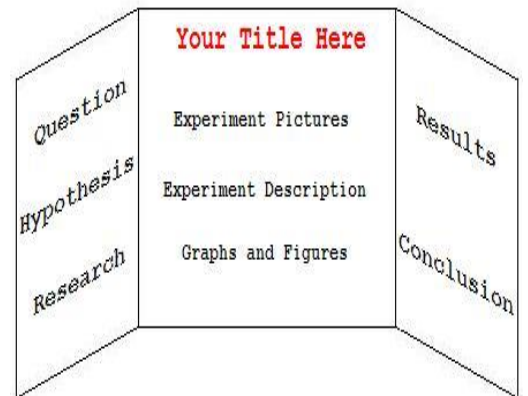

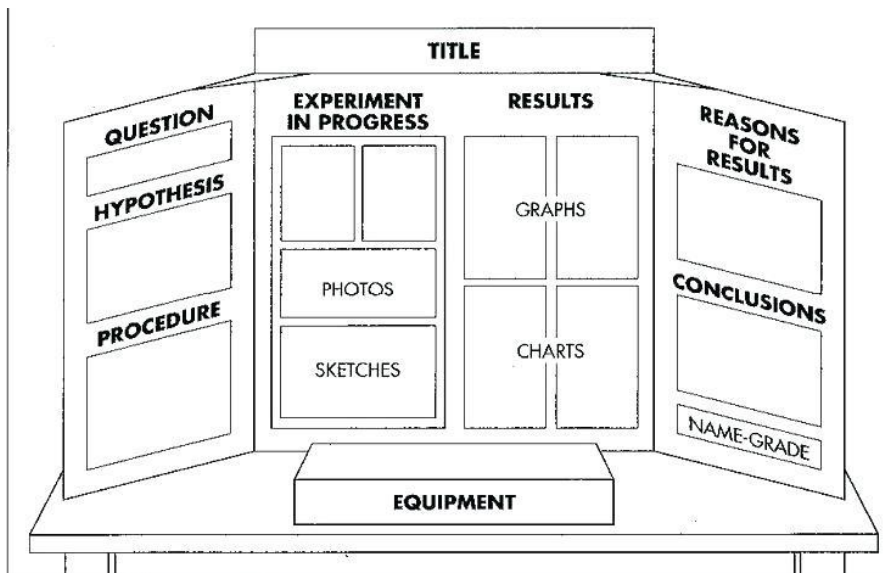

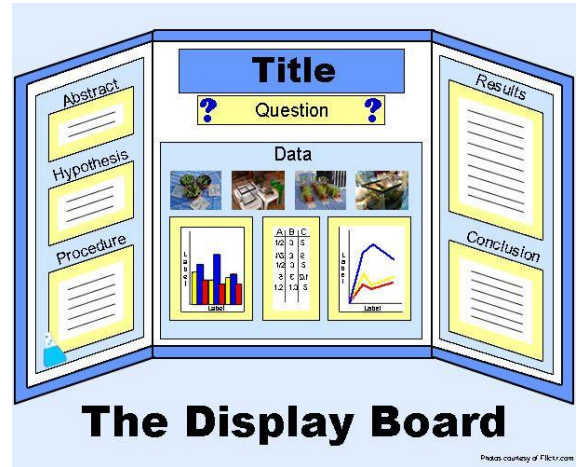

Results: Data (graphs, charts) & Analysis

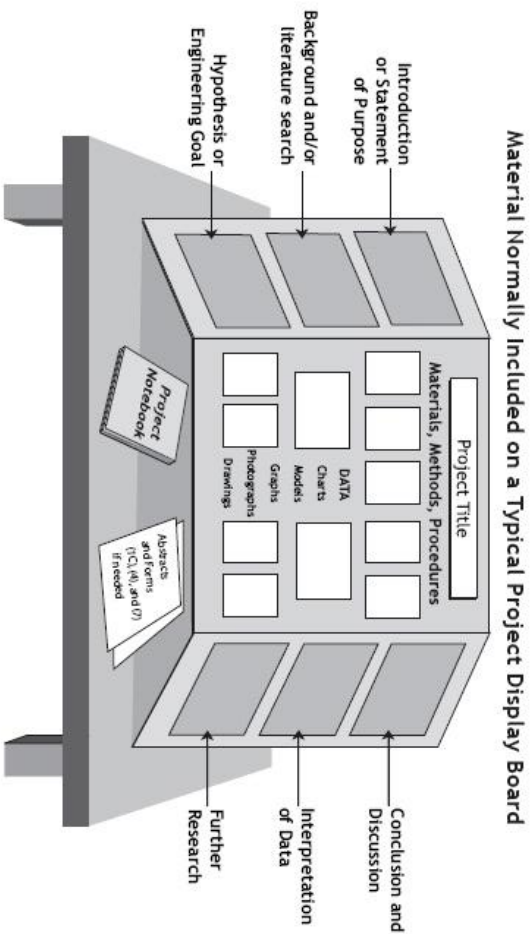

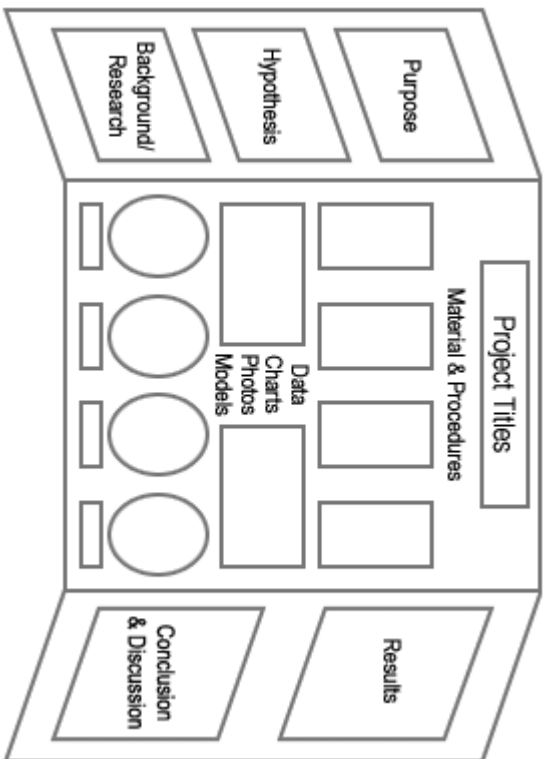

Conclusion

References and Acknowledgements

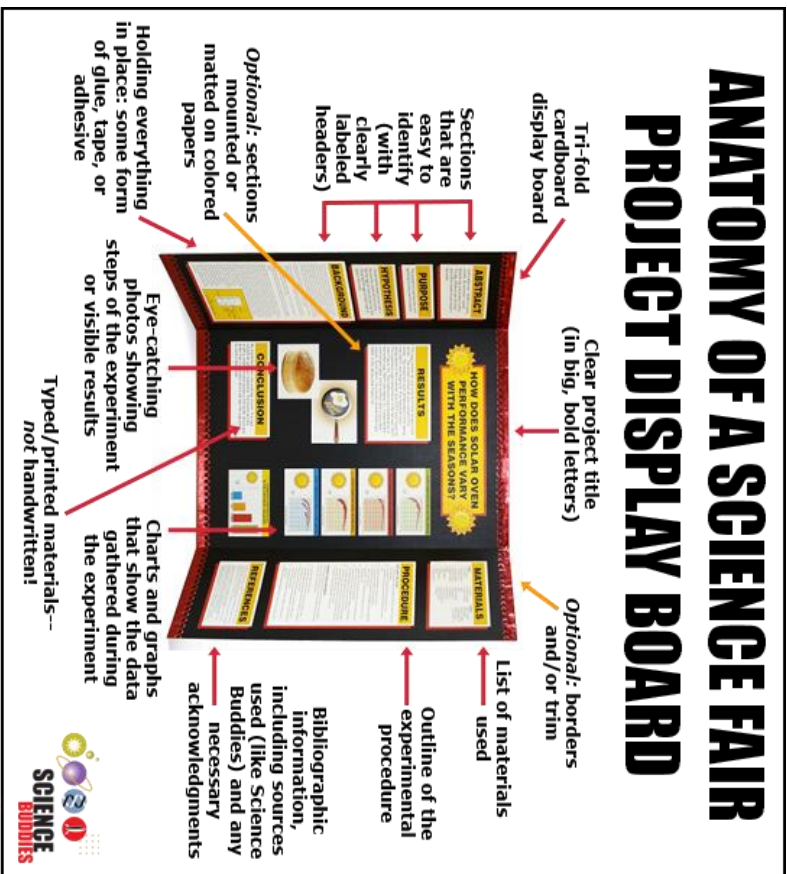

Note that information can be put into combined sections.

See the sample images for ideas of an acceptable display.
